Ideas for a changing world

# Webinar | What are the Potential Benefits of Universal Access to Retirement Savings?

## Presenters:

**Angela M. Antonelli**, Research Professor and Executive Director, Georgetown Center for Retirement Initiatives

**Ethan Conner-Ross**, Senior Vice President and Principal, Econsult Solutions, Inc. (ESI)

## Discussants:

**Courtney Eccles**, Director, Illinois Secure Choice

**David John**, Senior Policy Advisor, AARP Public Policy Institute

**Melissa Kahn**, Managing Director, State Street Global Advisors

**David Morse**, Partner, K&L Gates LLC

# Significant Gap in Access to Retirement Savings Among Private Sector Workers

- US employers are not required to offer a retirement savings plan
- Estimate 46% of the private sector workforce lacks access to workplace retirement savings plans (57.3 million workers in 2020)

More than 57 Million Employees Lack Access to a Retirement Savings Plan in their Workplace (2020)

ESI analysis of Census Bureau Current Population Survey and BLS National Compensation Survey Data.

# An Aging Population Increases the Urgency

- Senior households are growing in number and share of the population (falling from ratio of 4:1 to 2:1 by 2040)
- Increasing fiscal pressure from a decreasing share of working age households
- Generational shifts by 2040: Millennials and Gen Z will be in prime working years (30-60) and need to save for retirement

ESI analysis of US Census Bureau data and University of Virginia Population Projections.

# Current U.S. Efforts to Close the National Access Gap Likely to Fall Short

- Several other countries seek universal access through a mix of public and private models, often requiring employer participation
- National universal access proposals in the U.S. have been introduced for more than a decade and failed to advance
- Recent U.S. efforts, including state-facilitated retirement savings programs and the SECURE Act are positive steps, but more will need to be done to significantly close the national access gap

## Employer-Based International Savings Programs

**Australia Superannuation Guarantee** – 16.7 million participants

Requires employers to contribute 9.5% of an eligible employee's earnings to a retirement savings account.

**KiwiSaver** – 3 million participants

Workers auto enrolled (can opt out) to contribute  $\geq 3\%$  of earnings + 3% employer match and a tax credit contribution.

**UK NEST** – 9 million participants

Uncovered workers auto enrolled (can opt out) at default contribution levels of 5% employee + 3% employer.

## SECURE Act Creates New Pooled Employer Plans

## Recently Launched State Auto-IRA Programs

**OregonSaves** – Launched 2017

Auto-IRA program required for all employers without an existing qualified plan, 5% default employee contribution with auto-escalation, and no employer match permitted.

**Illinois Secure Choice** – Launched 2018

Auto-IRA program required for employers with  $\geq 25$  employees without an existing qualified plan, 5% default employee contribution, and no employer match.

**CalSavers** – Launched 2019

Auto-IRA program required for employers with  $\geq 5$  employees without an existing qualified plan, 5% default employee contribution with auto-escalation, and no employer match.

# National Proposals for Universal Access Have a History

- Congressional Legislation
  - Automatic IRA Act of 2019 (S. 2370; Senator Whitehouse)
    - Earlier version of bill introduced by Rep. Neal in 2017
    - Based on a national auto-IRA proposal first introduced by David John (Heritage Foundation) & Mark Iwry (Brookings Institution) in 2006 and received with bipartisan support
  - Automatic Retirement Plan Act of 2017 (H.R. 4523; Rep. Neal) – national 401(k) access
  - Whether an IRA or 401(k) bill, they have had these similar design features:
    - Employer contributions not required
    - Some employers exempt (e.g., those with <10 employees)
    - Completely voluntary for employees
- Other national reform proposals developed by policy experts reflect greater variations from the existing 401(k) and IRA system and often require employer contributions

# States Are Driving Change by Designing and Increasingly Adopting Universal Access Retirement Savings Programs

- Recognizing the significant fiscal and economic costs of doing nothing, states across the country have initiated a variety of efforts
- Trend is increasingly toward state-level universal access auto-IRAs (7 of the 12 state programs) requiring employers who do not have a retirement savings plan to either get one or to facilitate the ability of their workers to save through the state program

## State Facilitated Retirement Savings Program Models Adopted to Date

# Georgetown CRI Research Examines How National Universal Retirement Savings Models Affect Coverage and Savings

*Scenarios considered based on state programs and national legislative proposals*

Auto-IRA Baseline <i>all employers</i>	Auto-IRA <i>with employer threshold</i>	401(k) Voluntary Employer Contribution <i>with employer threshold</i>	401(k) Mandatory Employer Contribution <i>with employer threshold</i>
<ul style="list-style-type: none"> <li>✓ Participation required for all employers</li> <li>✓ Auto-enrollment (with employee opt-out)</li> <li>✓ Roth IRA savings vehicle</li> <li>✓ 5% default employee contribution auto-escalation 1%/year to 10%</li> <li>✓ No employer contribution</li> <li>✓ Coverage implemented in phases by employer size</li> <li>✓ Existing state Auto-IRA plans "grandfathered in"</li> <li>✓ Enhanced Saver's Tax Credit</li> </ul>	<ul style="list-style-type: none"> <li>✓ Participation requirement exempted for business below threshold of 10 employees and two years in existence</li> </ul>	<ul style="list-style-type: none"> <li>✓ Roth 401(k) savings vehicle</li> <li>✓ Voluntary employer contribution</li> </ul>	<ul style="list-style-type: none"> <li>✓ Employee contribution 4% initial, auto-escalation .5% to 7%</li> <li>✓ Mandatory employer contribution 1% initial, auto-escalation .25%/year to 3%</li> <li>✓ Employer contribution required for those covered by state plans and in existing private sector plans</li> </ul>

# Can Saving a Modest Amount Make a Difference? YES!

## Starting Sooner and Saving Longer Improves Retirement Outcomes

*By starting to save early through simple, automatic and consistent contributions, workers with average earnings levels will have the opportunity to build substantial private savings levels to increase their retirement incomes*

### Supplemental Lifetime Income at Age 65 for an Auto-IRA Saver

# An Enhanced Refundable Saver's Credit Can Significantly Boost Lifetime Income

- Research model isolates the potential impact of an enhanced refundable Saver's Credit on retirement outcomes
- A younger Auto-IRA saver can see their annual income in retirement grow from **\$14,320 to \$21,300** if eligible to take advantage of a refundable Saver's Credit

# National Universal Access Payroll Deduction IRA and 401(k) Scenarios Lead to a Significant Expansion in Participation

- Universal access will increase the number of workers saving for retirement in 2040 by 28 to 40 million workers (depending on design features)
  - Participation from about 50–70% of private sector workers who currently lack access
  - With voluntary worker participation, reaching 100% will not be possible (some workers will always choose to opt out)
- Baseline Auto-IRA scenario has no employee threshold (e.g., a national version of OregonSaves) to show what true universal access can do to increase participation and savings
- Participation levels fall significantly if employers below a certain firm size / age threshold are exempt (all other scenarios exempt employers with <10 employees / <2 yrs)

**Required Universal Access Can Increase Participation by 50-70% Among Workers Currently Lacking Access**

# How Designing the Employer Threshold for Required Participation Can Impact Access

*The number of workers at firms required to provide access will vary depending on how the employer threshold is set (with firm size minimums having a greater impact than firm age minimums)*

Employer Thresholds Have Significant Impacts on the Number of Workers at Firms Required to Provide Access to Savings

# All Scenarios Lead to Significant Expansion of Savings and Asset Accumulation

- The baseline Auto-IRA that covers all employers (truest universal access) has the highest overall level of savings
- When comparing a threshold auto-IRA to a threshold 401(k) allowing for voluntary contributions, the 401(k) may have higher average contributions and savings
  - The trade-off will be a modest reduction in the number of workers covered (1.3-1.5 million fewer participants)
- If employer contributions are required in a 401(k) (not envisioned to date in legislative proposals), the requirement on employers would reduce the overall level of savings and asset accumulation over time
  - The amount and pace of the employer contribution requirement will affect the negative drag on savings and asset accumulation

**Cumulative Savings Contributions are Highest Within the Baseline Auto-IRA Model, Totalling \$1.9 Trillion through 2040**

# Greater Savings and Asset Accumulation Accelerates Economic Growth and Tax Revenues

- Through increased savings and investment, the scenarios analyzed would result in faster growth in GDP and the tax base over time
- This accelerated growth equates to:
  - \$72-\$96 billion in additional GDP in the year 2040
  - \$11-\$14 billion in additional federal tax revenue in the year 2040

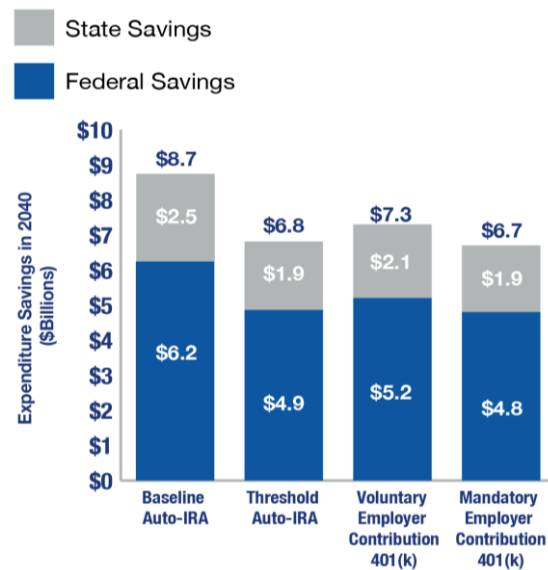

Increased Savings and Investment Boost GDP Growth by \$72-\$96 Billion in the Year 2040

# Increasing Retiree Incomes Can Reduce Federal & State Benefit Program Expenditures

- Benefit program spending (e.g., Medicaid, SNAP, LIHEAP) is expected to rise rapidly as the population ages
- Increased savings grows retiree incomes and materially reduces program needs over time
- State and federal governments share in these benefits each year
  - \$7-\$9 billion in federal and state program savings in the year 2040

Increased Retiree Resources Lead to Government Program Savings of \$7-\$9 Billion in the Year 2040

# The Potential Benefits of Universal Access to Retirement Savings: Key Takeaways

- Experience from other countries and the early evidence from individual states here in the U.S. demonstrate that expanded access can be achieved in simple, cost-effective ways that supports and includes a private market of providers ready and willing to compete to provide options for employers and their workers
- Regardless of the scenario selected, what is clear is that the benefits to savers, retirees, and to the nation would be significant. A national approach to universal access to retirement savings could:
  - Increase the number of workers saving for retirement in the year 2040 by 28–40 million, with participation from about 50–70% of private sector workers who currently lack access;
  - Help a young worker with a modest income who starts saving early and follows program defaults for 40 years to save enough to generate as much as \$14,320 in additional annual income for retirement, increasing to \$21,300 in annual income if eligible to take advantage of a refundable Saver's Credit;
  - Increase cumulative total retirement savings by \$1.4–\$1.9 trillion by the year 2040; and
  - Accelerate economic growth, increasing national GDP by \$72–\$96 billion in the year 2040
